Wi-Fi On Your Devices

1. Choose the Wifi network: **DMJX**
2. Write your DMJX username
3. Write your password (the one we use on Itslearning, mail etc.)
4. Accept the certificate - if you are asked

You are now connected to the DMJX WiFi

Wi-Fi On Android (Chromebook Or Phone)

There are different approaches to getting networked on an android based device but in general it is inside settings and network / wi-fi.

When you log on to the DMJX network, you will be asked for additional information. Therefore use the following:

EAP Method: PEAP

Phase-2 Approval: MSCHAPv2

Server CA Certificate: Do not check

Identity: *username@dmjx.dk*

Password: The code that you also use for mail, Itslearning, etc.

The rest of the fields must be empty.
